## PERSONAL STATEMENT

---

I am currently a 3rd year student following BSc. in Software Engineering at KIU. I am passionate about developing innovative solutions in the field of software development. My other areas of interest include full stack development, frontend development, and backend development. The aim is to contribute to dynamic development teams and create user-centric, scalable applications that solve real-world problems. With a solid academic foundation and hands-on project experience, I am eager to take on new challenges and grow as a software engineer.

## EDUCATION

---

### KIU Campus

2022 – 2026

BSc. (Hons) in Software Engineering  
Koswatta, Battaramulla

### Dharmaraja College Kandy

2017 – 2019

G.C.E Advanced Level  
Kandy, Sri Lanka

## SKILLS

---

**Programming Languages:** Java, Python, JavaScript, HTML, CSS, C#

**Libraries/Frameworks:** React, NodeJs, Spring Boot, Bootstrap, ExpressJs

**Tools / Platforms:** Git, Visual Studio Code, Visual Studio, Postman, Jira, Draw.io, Workbench

**Databases:** MySQL

## PROJECTS

---

### Atharaman

*Spring Boot, ReactJS, MySQL*

GitHub Link

The 'ATHARAMAN' website project is a comprehensive camping details website designed for camping enthusiasts. This research-based platform will serve as an essential resource, providing detailed insights into camping locations, gear recommendations, guides, safety tips, weather updates, and more. Given the rising popularity of outdoor activities, especially camping, there is a growing demand for reliable, centralized information that can enhance the overall camping experience. Our project intends to fill this gap by offering a well-organized, user-friendly platform that caters to both new and experienced campers.

### TravelCOMPASS

*Spring Boot, ReactJS, Python, MySQL*

GitHub Link

Travel Compass, a smart and user-friendly travel planning platform. Our goal is to help travelers easily plan trips based on their budget, while also giving hotels, guides, and vehicle rental services a space to connect with users. The most exciting part? Our platform uses AI to recommend the best travel packages based on each traveler's needs.

### **AutoDOC**

*NodeJS, ReactJS, MySQL*

GitHub Link

AutoDOC website is a digital platform that streamlines the process of booking, tracking, and managing vehicle maintenance and repair services. It allows customers to schedule service appointments, view service history, and connect with service providers efficiently, improving overall customer experience and workshop productivity.

### **VeteZ**

*NodeJS, ReactJS, MySQL*

GitHub Link

VetEZ is a software application designed to streamline operations and enhance pet vaccination management within veterinary clinics. It aims to offer a user-friendly and comprehensive platform that simplifies administrative tasks, improves communication with pet owners, and ultimately contributes to better pet health outcomes.
